To All Those Seeking Feedback On Stem Cell Therapy Results POST Injection Treatment

I wanted to take this brief moment and put it down in writing so others that are interested in Stem Cell Therapy would know that there are positive results.

My life has changed by this treatment of Stem Cell Therapy Infusion, that is offered at the office of Dr Lampard for a fraction of what it does cost out in the medical community. You must be careful of the quality that one might expect to actually receive. But I can attest to all the research my wife did on this therapy led us to his care, Dr. Lampard.

My wife is the one that pushed for me to get this treatment because I suffer from chronic pain Due to a severe car accident, severe shoulder pain, torn knee, high blood pressure, severe pain in my hands, feet, back, neck, back, headaches and 40 years of being a hands on pool contractor. The last straw was me being rushed to the hospital in Stuart Florida suffering from a Pulmonary Embolism in my lungs, which thank God I pulled through... barely. When my wife came to me and said, the appointment with Dr Lampard is on this date, this time do not be late, and stated it twice, I knew by the look on her face, " I WAS MAKING THAT APPOINTMENT WITH BELLS ON."

I have to admit I thought I would feel something immediately, I did not. In fact I stopped thinking about it until I had a post op exam by my heart Doctor who noticed my once noticeable heart murmur was no longer there. My blood pressure was also lower, now I have even noticed that my once severe injured shoulder that I was to have surgically repaired and had brought me to the emergency room where I was treated with I.V. Pain meds for 2 days was no longer hurting me, or the knee that I could barely walk around on without stopping and resting also was not bothering me.

I now wake up in the morning with less pain, I take less pain meds than I have in years, I can bend ,move, and lift things in the job that once could bring me to my knees in pain is now tolerable. Yes, I still have to control myself and not go the extra mile like I am superman. My pain Doctor is shocked at my appointments when I am asking for less medication and reducing the types of meds taken previously. Now my doctor wants the number to Dr Lampard's office so she can refer patients over to get treatment for the alternative.

For those who may be sitting of the fence, take that leap of faith and know this is the future of new and improved healing in healthcare. Its pure and will not kill you like all these experimental drugs they use on us. I have no regrets and the results are priceless. Its different for everyone and the body will filter these stem cells to the ailing parts that need it first.

Best Of Healing  
A Stem Cell Receiver,
